Contributing Title

Anonymized Authors

Anonymized Affiliations
email@anonymized.com

Abstract. The abstract should briefly summarize the contents of the paper in 150–250 words. If you are to include a link to your Repository, please make sure it is anonymized for the double-blind review phase.

Keywords: First keyword · Second keyword · Another keyword.

1 Important Messages to MICCAI Authors

This is a modified version of Springer's LNCS template suitable for anonymized MICCAI 2025 main conference submissions. The author section has already been anonymized for you. You cannot remove the author section to gain extra writing space. You must not remove the abstract and the keyword sections in your submission.

To avoid an accidental anonymity breach, you are not required to include the acknowledgments and the Disclosure of Interest sections for the initial submission phase. If your paper is accepted, you must reinsert these sections to your final paper.

To avoid desk rejection of your paper, you are encouraged to read "Avoiding Desk Rejection" by the MICCAI submission platform manager. A few important rules are summarized below for your reference:

1. Do not modify or remove the provided anonymized author section.
2. Do not remove the abstract and keyword sections to gain extra writing space. Authors must provide at least one keyword.
3. Inline figures (wrapping text around a figure) are not allowed.
4. Authors are not allowed to change the default margins, font size, font type, and document style. If you are using any additional packages, it is the author's responsibility that any additional packages do not inherently change the document's layout.
5. It is prohibited to use commands such as `\vspace` and `\hspace` to reduce the pre-set white space in the document.
6. Please make sure your figures and tables do not span into the margins.
7. If you have tables, the smallest font size allowed is 8pt.
8. Please ensure your paper is properly anonymized. Refer to your previously published paper in the third person. Data collection location and private dataset should be masked.

9. Your paper must not exceed the page limit. You can have 8 pages of the main content (text (including paper title, author section, abstract, keyword section), figures and tables, and conclusion) plus up to 2 pages of references. The reference section does not need to start on a new page. If you include the acknowledgments and the Disclosure of Interest sections, these two sections are considered part of the main content.

10. If you submit supplementary material, please note that reviewers are encouraged but not required to read it. The main paper should be self-contained. *NEW* Supplementary materials are limited to multimedia content (e.g., videos) as warranted by the technical application (e.g. robotics, surgery, ...). These files should not display any proofs, analysis, or additional results, and should not show any identification markers either. Violation of this guideline will lead to desk rejection. PDF files may NOT be submitted as supplementary materials in 2025 unless authors are citing a paper that has not yet been published. In such a case, authors are required to submit an anonymized version of the cited paper.

2   Section

2.1   A Subsection Sample

Please note that the first paragraph of a section or subsection is not indented. The first paragraph that follows a table, figure, equation etc. does not need an indent, either.

Subsequent paragraphs, however, are indented.

Sample Heading (Third Level) Only two levels of headings should be numbered. Lower level headings remain unnumbered; they are formatted as run-in headings.

Sample Heading (Fourth Level) The contribution should contain no more than four levels of headings. Table 1 gives a summary of all heading levels.

Table 1. Table captions should be placed above the tables.

Heading level	Example	Font size and style
Title (centered)	Lecture Notes	14 point, bold
1st-level heading	1 Introduction	12 point, bold
2nd-level heading	2.1 Printing Area	10 point, bold
3rd-level heading	**Run-in Heading in Bold.** Text follows	10 point, bold
4th-level heading	*Lowest Level Heading.* Text follows	10 point, italic

Displayed equations are centered and set on a separate line.

$$x + y = z \tag{1}$$

Please try to avoid rasterized images for line-art diagrams and schemas. Whenever possible, use vector graphics instead (see Fig. 1).

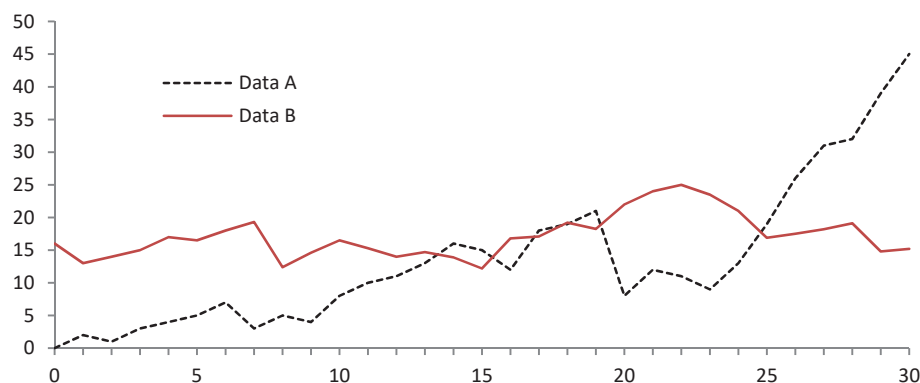

Fig. 1. A figure caption is always placed below the illustration. Please note that short captions are centered, while long ones are justified by the macro package automatically.

Theorem 1. *This is a sample theorem. The run-in heading is set in bold, while the following text appears in italics. Definitions, lemmas, propositions, and corollaries are styled the same way.*

Proof. Proofs, examples, and remarks have the initial word in italics, while the following text appears in normal font.

For citations of references, we prefer the use of square brackets and consecutive numbers. Citations using labels or the author/year convention are also acceptable. The following bibliography provides a sample reference list with entries for journal articles [1], an LNCS chapter [2], a book [3], proceedings without editors [4], and a homepage [5]. Multiple citations are grouped [1–3], [1, 3–5].
